

# A Thoughtfully-Designed Path for Every Student

Promoting student engagement goes beyond encouraging involvement. It's about highlighting valuable co-curricular opportunities, championing self-efficacy, and providing access to a meaningfully sequenced path for every student. With our scalable Paths tool, you'll be able to do just that. Whether the focus is on orientation, intercultural competency, a capstone experience, or something else, you can design programs that help students develop their skills beyond the classroom.

Since 2017, American International College (AIC) has been using the Paths tool to organize and manage the Co-Curricular Experiences (CCEs) part of the APEX Program. CCEs involve the following four domains: **Intellectual Development & Lifelong Learning, Personal Growth, Social & Cultural Competency,** and **Career & Professional Development.** Leveraging the Paths tool supports their vision of a four-year comprehensive student success approach that integrates learning inside and outside of the classroom.

## An enhanced and strategic co-curricular journey

### Guide intentional learning

Help students discover the right path by letting them explore, choose, and find meaning along the way.

### Design meaningful co-curricular experiences

Direct students to experiences that support reflective, integrative, and higher-order learning—all while providing a visual interactive map of their progress.

### Align your programming with institutional goals

Align students' co-curricular involvement with institutional learning outcomes and demonstrate how your programs support divisional and institutional goals.

### Encourage valuable self-reflection

Highlight formal opportunities that offer exposure to new and varied experiences, and then encourage students to share self-reflections.

### Demonstrate progress and achievement

Showcase competency development with reports about program completion across each identified level, track, and learning outcome.

### Automate the tracking of activities and memberships

Use card-swipe data and mobile check-ins to capture participation in real time and automate the tracking process.

Through paths we have been able to expand our partnerships and provide better collaboration with various departments college-wide.
