

# anthology. Academic Economics

## Effective education and operational efficiency, no longer mutually exclusive

Connect the dots like never before with analytical insights into the relationships between your students' credit hours, courses, and cost allocations. Inform campus conversations, identify opportunities for growth and institutional impact, and more.

### Key Capabilities:

Generate margins by programs, majors, and courses

Discover impacts of changes to KPIs such as discount rate and tuition costs

Review faculty and course size at program, department, and course level

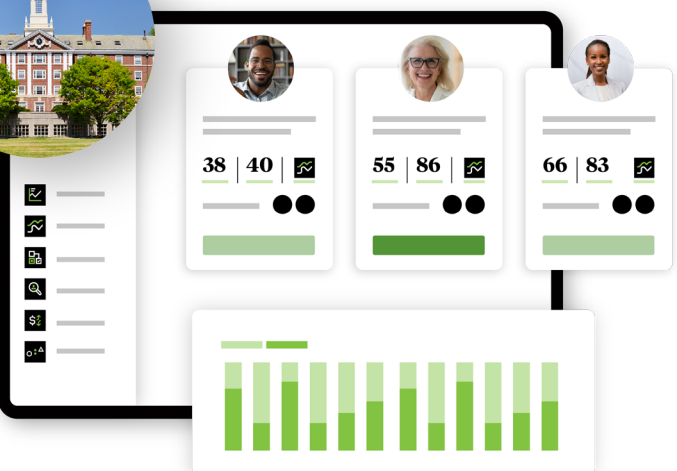

Plan scenarios related to tuition costs for operations

Anticipate trends in instructional expenses, examined by course size and type

Adjust faculty coverage ratios

## Understand the operational “big picture”

Gain a 360-degree view of your academic economic situation from every level of the institution and identify trends within your campus data.

## Examine your processes in new detail

Uncover the roles each program plays in achieving your mission and make investment decisions to ensure the continued success of your students and campus.

## Involve the entire institution

Help administrators and faculty members understand revenue and expenditures at the college, program, and major level with information that can be found and shared across the institution in an easily understood manner.

## Make an educational and operational impact

Use comprehensive data and visualizations to build strategies that will impact the future of your institution and academic programs.
